#1 The Commuting Student

Name: Angela Cruz
Age: 19
Occupation: College student
Daily transportation: Jeepney, bus, and walking
Angela travels for almost two hours every day to attend her classes. She usually carries a backpack containing her laptop, charger, notebooks, umbrella, water bottle, wallet, identification card, earphones, and personal items.
Because her bag has only one large compartment, her belongings often become mixed together. Her charger and earphones become tangled, her identification card is difficult to find, and her water bottle sometimes leaks onto her notebooks.
When it rains, Angela struggles to open her umbrella while carrying her bag and other school materials. After using the umbrella, she does not know where to place it because it is wet. She usually puts it inside a plastic bag or carries it separately.
Angela often feels tired, uncomfortable, and worried that her laptop or notebooks might become damaged during her commute.
Important Details

- Angela cannot afford an expensive bag.
- She carries many items but does not want a very large or heavy product.
- She frequently travels in crowded vehicles.
- The product should be easy to carry and use while standing.
- The product should protect her belongings from rain or accidental spills.

Design Challenge
How might we help Angela organize, protect, and carry her belongings more conveniently during her daily commute?

Prototype Overview

A. Laptop, Notebook, Charger
B. Water Bottle
C. Umbrella
D. Wallet, ID
E. Personal Items

Thank You
